

The image features three rough, light blue-green sodalite stones with darker, almost black, inclusions. Each stone is encircled by a thin, glowing golden ring. The stones are arranged around the central text. In the bottom right, a circular inset shows a close-up of a wavy, layered pattern in a dark green color. The background is a dark, gradient grey.

SODALITE

STONE

MARBLE

MARBLE

Bianco Impala

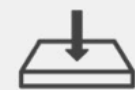

It is always good to remember that our magnificent Bianco Impala marble is recognized for its predominant characteristics: alternating stripes of white and gray, horizontally, along the entire slab.

This sparkling stone has a mix of dolomite and calcite in its composition, with slight movements in gray calcite, being **white its predominant color**. Brazilian marbles are known to **perform well above** conventional products found on the market, due to their **hardness and differentiated mineral composition**. This is the Brazilian Marble Revolution!
